Why Not Haskell?

I'm trying to figure that out

because I enjoy using it so much

It has a reputation for being hard to learn

but I don't think that's it

sometimes the pitch is bad

we should be friendly

and help people solve the real problems they already have
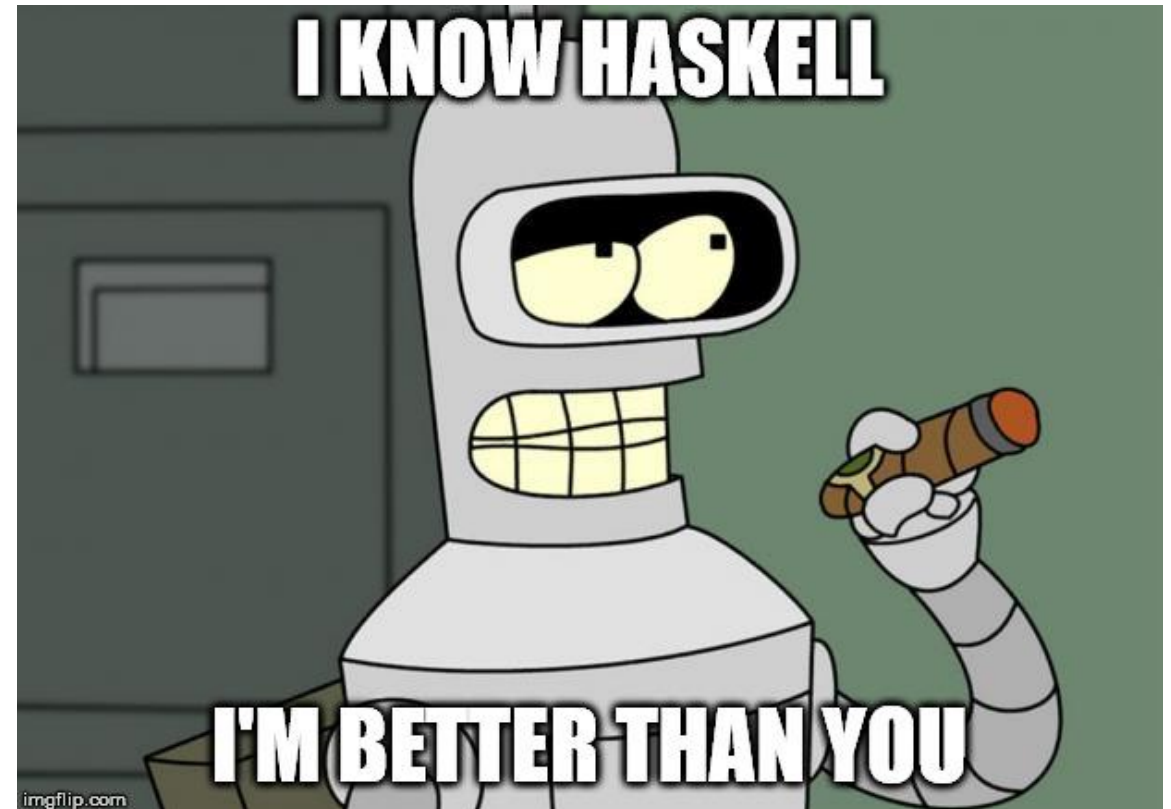

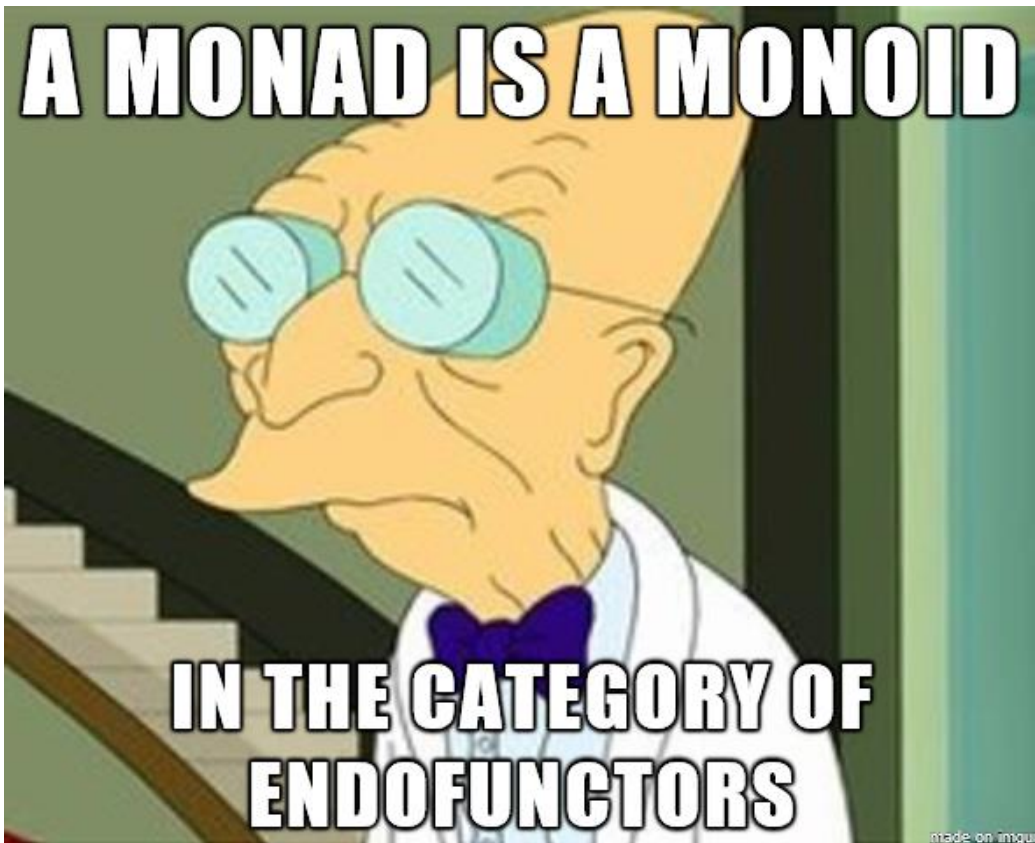

sometimes we focus too much

on the wrong parts of the language

getting stuff done

should come before learning category theory

sometimes we just forget

how we can look to other people

sometimes it's just that we

"Avoid Success At All Costs"
